

WHAT IS CLAIMED IS

1. A transparent small memory card to be set in an electric device,
comprising :

5 A substrate having an upper surface and a lower surface, the upper surface
formed with a plurality of connected points and a plurality of golden fingers
electrically connected to the plurality of connected points, the substrate is used to
set in the electric device, so that the golden fingers on the upper surface of the
substrate may be electrically connected to the electric device;

10 At least one memory chip, which arranged on the upper surface of the
substrate, electrically connected to a plurality of connected points on the upper
surface; and

A transparent glue layer encapsulated the memory chip is used to protect the
memory chip and display the mark of the memory chip or the substrate.

2. The transparent small memory card according to claim 1, wherein the
15 lower surface of the substrate arranged a memory chip, and the transparent glue
layer is encapsulated the memory chip.

3. The transparent small memory card according to claim 1, wherein the
upper surface of the substrate is arranged two memory chips, and the transparent
glue layer is encapsulated the two memory chips at the same time.

20 4. The transparent small memory card according to claim 1, wherein the

KT151A

memory chip is electrically connected to the connected points of the upper surface of the substrate by wires.
